

Create a to-do list web app in flask and any template engine of your choice. The app should have following functionalities

- Add a task to to-do list
- Update a task
- Delete a task
- Show the list of all tasks
- Search a task(Optional)

This assignment will be evaluated on the basis of

- Code Quality
- Functionality
- UI design

Make the data persistent using the database.

Possible steps:

1. Good, flexible API
2. Proper folder structure
3. Handle input validation, 404 etc.
4. Middleware authentication
5. Easy to understand API documentation
6. Clean UI
7. Add user wise Todo data and connect to DB.
